

Product description

SURFACE RENEWAL TECHNOLOGY

- SRT Gloss Basic (art. 9900)
- SRT Gloss Hardener (art. 8800)

PRODUCT DESCRIPTION

SRT (Surface Renewal Technology) is a clear coat, which is suitable for various surfaces. The coating can be applied by hand with a special cloth, and has a restorative function. Disassembly is not necessary. After the right pre-treatment, the original color of the paint will appear and SRT will provide a permanent gloss on the surface. The coating also protects the surface against persistent influences. SRT is applicable in many sectors like automotive, aviation, shipping, industry and construction.

APPLICATION AREA

SRT is applicable to almost all painted surfaces, with the exception of wood and stone.

SELECTION AND PREPARATION OF THE SURFACE

Depending on the condition of the surface. Cleaning, polishing, light scrub or clays are among the possibilities before applying SRT.

SUPPLIER

SRT is part of Allround Paint Protection BV
Avignonlaan 47
5627GA Eindhoven
The Netherlands

Summary

Innovation:	A unique concept for the manual application of a color- and gloss renewal clearcoat, at low costs and with minimal energy and materials.
Functionality:	Economically efficient because of the way to manually applying the clearcoat on almost any painted surface. Disassembly of parts is not necessary.
Aftermarket relevance:	An excellent and economical alternative for repainting a surface. SRT is aromatic-free and highly chemical resistant.
Safety:	All solvents in the product contain no aromatic substances, in contrast to most lacquers.
Durability:	Surfaces which are affected, can be recovered with less effort and less product for a long-term period.
Environment:	Contribution to environmental protection by saving on energy costs and persistent resources. To reach about the same result as in conventional processes, we use a lot less energy and raw materials with our manual system.
